## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

2. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, 13, 15-17, drawn to methods of determining an individual's predisposition to breast cancer, development of breast cancer and/or responsiveness of therapy for breast cancer by determining the CAG repeat of the AR gene.

Group II, claim(s) 10-12, 14, 18, drawn to methods of screening and selecting agents which modulates breast cancer predisposition.

3. The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons.

The technical feature of Group I appears to be the association between the known CAG repeat of the androgen receptor gene and breast cancer. This technical feature is not special because this technical feature is not a contribution over the prior art. Elhaji et al (Abstract Cancer Genetics, A64, October 1997) teaches an analysis of polymorphic CAG repeat of the androgen receptor and female breast cancer. Elhaji teaches that the CAG repeat normally ranges from 11-33 repeats. Elhaji teaches that the analysis shows a significant shift to greater length in the distribution of CAG repeats

lengths in breast cancer samples. Thus, Elhaji teaches a predisposition to breast cancer by analyzing the known CAG repeat of the androgen receptor gene and breast cancer.

The methods of Group I and Group II do not share a special technical feature. As provided above, there is no special technical feature. Moreover the methods of determining predisposition and screening for agents are not the same method. The methods of screening and selecting agents requires method steps which are not the same as those required in the method of determining a predisposition to breast cancer. Each of the methods have different objectives, different uses, different reagents and different method steps.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Jeanine Goldberg whose telephone number is (703) 306-5817. The examiner can normally be reached Monday-Friday from 8:00 a.m. to 5:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax number for this Group is (703) 305- 3014.

Any inquiry of formal matters can be directed to the patent analyst, Pauline Farrier, whose telephone number is (703) 305-3550.

Any inquiry of a general nature should be directed to the Group receptionist whose telephone number is (703) 308-0196.
